Prometheus Security Group Appoints Colonel (Ret.) Thomas Segars as Director of Strategic Security Programs

AUSTIN, TX — June 26, 2025 — Prometheus Security Group (PSG), a leader in Zero Trust physical security solutions, proudly announces the appointment of Thomas Segars as Director of Strategic Security Programs. In this role, Mr. Segars will lead the company's strategic initiatives and business development efforts across the federal government landscape, with a focus on mission-critical infrastructure, national security programs, and advanced edge security deployment. He'll also focus on expanding adoption of Prometheus' Digital Encrypted Security Interface (DESI) and Universal Field Panel (UFP) in federal and defense settings, ensuring physical infrastructure is protected with Zero Trust principles and authenticated data from the edge.

Segars brings over three decades of experience in physical security, nuclear security, anti-terrorism, and federal law enforcement. A retired United States Air Force Colonel, Segars most recently served as the Director of Intelligence, Strategic Plans and Requirements for the Air Force Installation and Mission Support Center, where he oversaw planning and threat mitigation strategies across global Air Force installations. Segars holds a bachelor's degree in criminal justice from the University of Georgia, a master's in human resources development from Webster University, and a Master of Strategic Studies from the U.S. Army War College. A graduate of the FBI National Academy (Session 263), he holds a Department of Defense Counter-Insider Threat Professional certification.

"We're honored to welcome Colonel Segars to the team," said Rick Gross, Founder and CEO of Prometheus Security Group. "His operational leadership, extensive understanding of government security requirements and experience, coupled with his commitment to national defense make him the ideal leader to advance our mission of securing the nation's most critical assets from the edge to the enterprise."

Segars brings a mission-first mindset and deep alignment with PSG's core values—a perspective shaped by decades of military service and collaboration with FED-GOV programs, projects and partners. "I'm thrilled to join PSG in this critical role, as I've long respected PSG's outstanding contributions to the Air Force, DOD and DOE enterprises. PSG's leadership is unmatched, their technology is unparalleled - spanning a 40-year history of leading the modernization of the defense industrial base and critical infrastructure with multiple first and only unmatched capabilities. The most recent is their first and only Zero Trust Architecture (ZTA) for physical security edge devices – they continue to set the standard."

About Prometheus Security Group (PSG)

Prometheus Security Group are the recognized subject matter experts (SME's) in the security industry. Delivering next-generation security solutions, bridging the gap from legacy analog to advanced digital systems in critical environments. PSG enables physical security teams to do what IT has done for years—implement true Zero Trust Architecture (ZTA) at the edge. Our unified ZTA solution and integrated technologies provide continuous authentication and verification from edge sensors to the enterprise, **enhancing response team safety, increasing awareness and mission success**. At the core of PSG's platform is a Security Command Center utilizing a cyber secure, high-performance computing cluster (HPC) which unifies access control, intrusion detection, video surveillance, into a single Zero Trust environment. High-security and critical asset facilities rely on PSG for clean, authenticated edge data to power AI-driven analytics which additionally lowers costs while increasing security and modernization. Backed by top federal certifications, three patents, \$130 million+ in intellectual property, PSG meets the most rigorous security standards, including a FED-GOV PL1N Authority to Operate (ATO) on government networks. Headquartered in Austin, Texas – we operate globally—supporting defense, energy, critical infrastructure and enterprise markets.
